

Virtue Meeting Centre

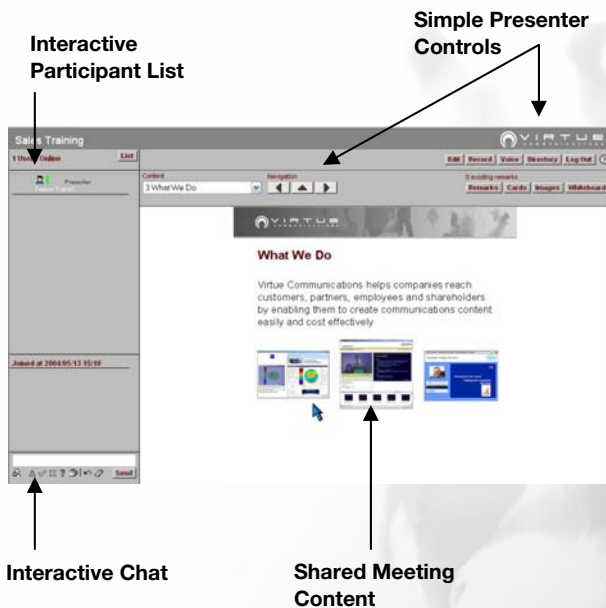

Virtue Meeting Centre is the most advanced and easy-to-use solution for interactive online meetings. Collaborate and share ideas across your organisation and interact remotely with partners and customers, eliminating the need for travel and related expenses. Make faster more accurate decisions resulting in increased effectiveness and productivity.

Real-time productive communications

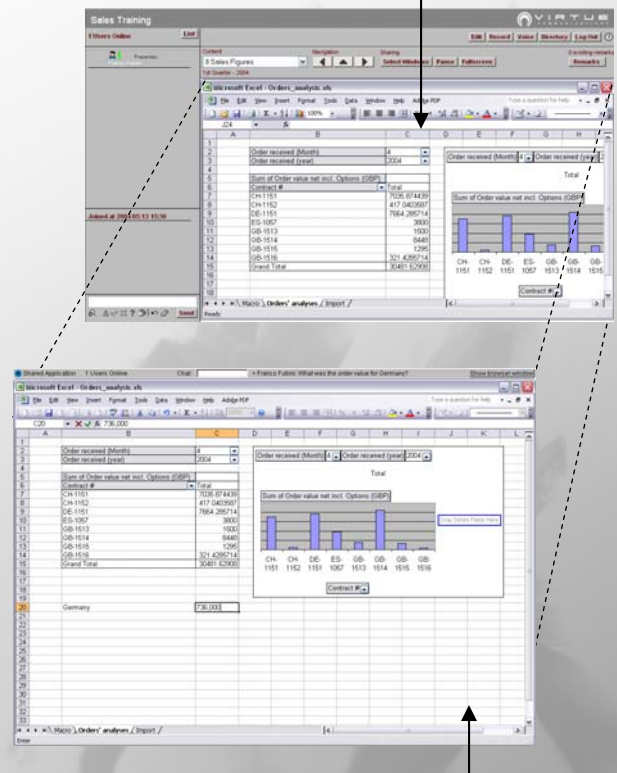

Virtue Meeting Centre integrates data, voice, video, multimedia content, application sharing, and more to deliver highly interactive, real-time communications. Just-in-time import allows users to integrate content as the meeting progresses, providing a highly flexible and interactive forum which maximises productivity.

Work faster, smarter

- Increase sales effectiveness by jointly working on a customer offer and demonstrating new products faster
- Increase employee buy-in through interactive and engaging communication
- Convert leads into clients faster by eliminating scheduling delays of face-to-face meetings
- Dramatically reduce communication costs by eliminating the need for costly travel

Share any application and collaborate on documents in real-time

Simplicity

Virtue Meeting Centre's ease of use, fast and effortless deployment, and foolproof user access allows you to instantly derive the benefits of online collaboration. With no need for software installation for meeting participants and no firewall concerns, you can focus on your communication and business needs.

Product profile

Meeting Content

- Any content viewable via a browser can be using in your meetings.
- Easily import content from an external content management system.
- Import content in advance or “just-in-time”.
- Re-use existing content and commence new meetings with just one-click.

User Management

- User registration: centralised or decentralised user registration to suit your specific meeting needs.
- User roles: numerous user roles give the right people the right control.
- User data: view reporting and statistics for effective post-meeting follow-up and evaluation.

Real-Time Interactivity

- Information sharing: no need for participants to download any software or plug-ins to attend meetings and view all content.
- Communication: use text and voice to communicate easily and effectively.
- Application sharing: any application can be shared even if participants don't have it installed on their PC. All changes and movements are visible, can be locally saved, and control can be handed over to any participant.
- Surveys & instant polls: prepare surveys prior to the live meeting, or create them on the fly.
- Instant feedback: instantly see whether participants watch the content, use a specific tool, or fill out a questionnaire – so you can react accordingly.
- Peer-to-peer interaction: participants communicate privately without disturbing others.
- Brainstorming cards: easily create brainstorming cards and share them with other participants
- Threaded annotations: create and store annotations for later use and efficient follow-up. Annotations are visible in real-time and stored with other meeting content.
- White board: enhance existing content through text, annotations and comments. Changes are immediately visible to all participants.
- Breakout groups: assign participants to groups for eLearning and small group collaboration.

Asynchronous Collaboration

- Self-paced content viewing: configure meetings to allow registered users access to content before and after the live session.
- Threaded annotations: for each section, annotations can be created for answering later by an expert.
- Surveys & polls: meeting owners can easily prepare interactive surveys for participants to fill out at their convenience.
- Multimedia streaming: archived audio and video content can be activated by the meeting owner or participants and watched in its entirety or only those sections which are relevant.
- Event playback: for those participants who couldn't attend the live meeting. Playback sessions include all shared content, surveys and annotations; additionally it can simulate a “live environment” by playing back communication and feedback that took place during the live meeting.

Voice over IP and Video

- Audio conferencing: high quality audio capabilities are available for meeting owners and all participants, with no need for software installation.
- Speaker management: control speaker capabilities for more efficient communications. Transfer the microphone to any participant with just one-click.
- Audio & video streaming: easily integrate streamed content into the meeting.

Reporting

- Tracking and reporting: all relevant data is tracked and reported for meeting evaluation. Additional reports can also be generated.
- Usage statistics: get insightful information into participant behaviour and reaction to content to improve meeting success.

Security

- Sophisticated user management and encrypted content, ensures only authenticated users have access, giving you the peace of mind to conduct event the most confidential of meetings.

Customisation & Integration

- Customisable interface ensures the look and feel of your meetings is in line with your CI.
- Quick and easy integration with 3rd party products including document and content management systems, enterprise portals, calendar and scheduling tools.
