

*Foroso further extends accessibility*

## **Foroso Communications ships Release 3.1**

**Munich, April 28, 2004 – Having concluded all engineering tasks and extensive beta tests, Foroso Communications today announced that it has shipped Release 3.1. The new release includes various enhanced features, but also substantial architectural optimizations that provide improved support for users with low bandwidth connections.**

Foroso Communications today ships Release 3.1 of the Foroso Training Center and Foroso Meeting Center.

With this new release, users with limited connectivity can be supported much better. This is especially meaningful if users want to talk (VoIP) concurrently with application sharing. These two features combined require a certain minimum bandwidth which is now further reduced. Moreover, the new architecture facilitates priority management of features, providing for example high voice quality at scarce bandwidth.

Scalability at the server side was further optimized. This results in support for up to 100% more users with the same server hardware. This translates into reduced operator costs and an even better cost-benefit ratio.

Additionally, a variety of features was extended. This includes more detailed access administration, pre-loading of content, customizability of the layout, further improved white board and application sharing, as well as enhancements for reports and administration.

Foroso's systems continues to operate without the need for any client software installation. Neither firewalls nor networks need to be configured. Thus, Foroso offers an unusually accessible system with a complete feature scope.
