

Foroso expands its technical lead

Foroso Communications Brings Release 2.0 to Market

Munich, October 14, 2002 –Foroso Communications expands its technical lead with release 2.0 of its products. Foroso's own VoIP component offers high quality speech capabilities without the necessity to install any software. Multi-client support fulfills the most important extension request of service providers. And a new optimized user interface simplifies usage even further.

Foroso Communications, a developer of Real-Time Enterprise Collaboration products brings today release 2.0 of its products *Foroso Meeting Center™* and *Foroso Training Center™* to market.

Besides numerous smaller improvements, there are three central enhancements. These are firstly a high quality VoIP (Voice over IP) component, secondly multi-client capabilities of the products and thirdly a further simplified user interface.

Foroso developed its own VoIP component that yields a number of advantages against comparable technologies. These are very easy accessibility, since users do not have to install any software. Foroso is compatible with all firewalls without any adjustments to make. Users simply log in to the online meeting through their browser and can start immediately to communicate by voice with others participants. This leads to the next advantage, which is very high speech quality and stability, even in a low bandwidth environment. Foroso's VoIP requires only the capacity of half an ISDN line and thus supports all business scenarios with high reliability.

The multi-client support enables service providers and large customers to manage any number of independent areas in one single installation. Thus every provider customer and every customer department can get their own installation. Multi-client support reduces the administration effort. And users do not even notice a difference in comparison to a dedicated installation.

The third important news relates to the user interface. Since Foroso's central emphasis is on simple usage, the company continued to invest here.

With release 2.0, there is an attractive and intuitive browser-based interface, that can be used even by new users in a matter of minutes.
